Executive Summary

Official Development Assistance : Trends and Issues in OECD/DAC

Yul Kwon

The Development Assistance Committee (DAC) of OECD has contributed to the formulation of development cooperation programmes and policies by donor countries and by multilateral institutions active in development cooperation since the 1960's. DAC has also been the source of information on the flow of financial resources to developing countries, and has regularly published the data collected from its member countries.

According to DAC's definition, Official Development Assistance (ODA) is defined as those flows to developing countries and multilateral institutions provided by official agencies, each transaction of which meets the following tests: i) it is administered with the promotion of economic development and welfare of developing countries as its main objective; and ii) it is concessional in character and contains a grant element of at least 25 per cent.

DAC has stressed that substantial additional aid efforts will be required, both quantitatively and qualitatively, for development cooperation and has set three major ODA targets: i) a net flow of

ODA equal to 0.7 per cent of the donor's GNP; ii) a net flow of ODA to least developed countries of 0.15 per cent of GNP; iii) the provision of ODA by each donor on terms such that the commitments made convey an average grant element of 86 per cent. According to this last target, DAC has been endeavouring to seek appropriate ways and means of untying national aid programmes and providing a framework for the orderly use of associated financing related to tied aid.

The aid volume performance of individual DAC members in recent years has varied considerably. While private flows have expanded, overall DAC aid has faltered since the beginning of the 1990's. On a net disbursements basis, total ODA from DAC countries amounted to US\$48.3 billion in 1997, that is, a net flow of ODA equal to 0.22 per cent of the donor's GNP. DAC countries channelled approximately one third of their net ODA through multilateral agencies in 1997, Seven DAC countries (Denmark, Ireland, Luxembourg, the Netherlands, Norway, Portugal and Sweden), provided at least 0.15 per cent of their GNP to least developed countries.

Korean ODA is relatively small and the largest share consists of multilateral aid. Korea's ODA in 1997 was equivalent to 0.042 per cent of GNP, which was far behind the lowest level (0.09 per cent for the United States) as well as the DAC average (0.22 per cent). With regard to the current level of Korea's ODA, Korea needs to significantly expand its external Assistances quantitatively, and improve the terms and conditions of aid qualitatively.

While there exists no consensus or official position on the proper

level of Korea's ODA, its ODA policy has reached a turning point in its evolution, because Korea has had to prepare for its accession to the DAC sooner than originally anticipated, after obtaining OECD membership in 1996. Supposing that ODA/GNP increases by 0.01% annually, Korea's ODA will amount to about US\$559 million (equivalent to 0.1 per cent of GNP) in 2004 and US\$1 billion (equivalent to 0.16 per cent of GNP) in 2010. This confronts budgeting officials with a dilemma as to how to accommodate ODA expansion with other competing domestic policy interests.

There are several future tasks facing Korea's ODA in relation to the present ODA system and policies. First, the Korean government must elaborate its aid philosophy, or ODA charter, in which aid should be justified and expanded as it begins to embark on a new stage of its ODA evolution. Second, a new approach needs to be adopted, in order to improve the capacity to plan and manage projects, through the reinforcement of policy implementation, for example country-specific programming.
